

Miniature Shelf

(Heavy-Duty)
Assembly Instructions

This heavy-duty Miniature Shelf is ideal for holding most miniatures. It is designed to hold up even fairly heavy miniatures, but if the shelf sags significantly when you place your miniatures on it, do not use the shelf for those types of miniatures. PaperGizmo makes no guarantees regarding suitability for your particular miniatures.

Assembly:

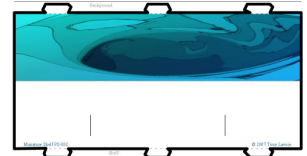

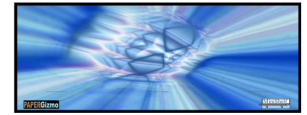

Print only on high-quality 65-lb or heavier cardstock.

For best results, use a hobby (i.e. X-Acto) knife to cut out the parts. When cutting, work slowly and cut as close to the line as possible.

Cut along solid lines. Fold along dashed lines. For longer dashed lines, *lightly* score the line with a hobby knife before folding.

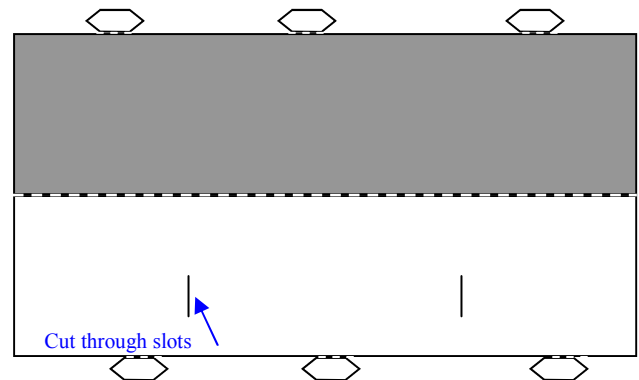

Fold shelf brackets so that tabs meet. Insert bracket tabs into slots in bottom section of shelf and fold tabs outward. Tape is not necessary, but you may apply a small piece of tape to the tabs if desired. Fold shelf along dotted line and insert shelf tabs into slots in backdrop, folding tabs outward. Again, tape is not necessary, but apply if desired.

Tack assembled shelf to bulletin board or wall. Insert tacks through backdrop low down, just above the top of the shelf.
